

Customer Revenue Performance Dashboard | Power BI

Project Overview

The Customer Revenue Performance Dashboard is an interactive Business Intelligence solution developed in Power BI to analyze customer revenue, order performance, customer categories, and revenue contribution.

This project demonstrates practical skills in Data Modeling, DAX Calculations, KPI Development, Customer Segmentation, and Dashboard Design. The dashboard enables stakeholders to identify high-value customers, understand category-wise revenue distribution, and monitor key business performance indicators.

Business Problem

Businesses often struggle to identify:

- Which customers generate the highest revenue.
- Revenue contribution by customer category.
- Average revenue and order value trends.
- High-value customer segments.
- Overall business performance through KPIs.

This dashboard addresses these challenges by providing a centralized and interactive reporting solution.

Dataset Information

Customers Table

Customer_ID	Customer_Name	Category
101	Krishna	VIP
102	Ravi	Gold
103	Rahul	Regular

Sales Table

Order_ID	Customer_ID	Product_ID	Revenue
1	101	P1	5000
2	102	P2	8000
3	101	P3	6000
4	103	P4	4000
5	102	P5	7000

Data Modeling

A relationship was established between:

Sales[Customer_ID] → Customers[Customer_ID]

Relationship Type

- Many-to-One (*:1)
- Single Direction Filtering

This model enables accurate aggregation and customer-level analysis.

DAX Measures Used

Total Revenue

Total Revenue =
SUM(Sales[Revenue])

Total Orders

Total Orders =
COUNT(Sales[Order_ID])

Average Revenue Per Customer

Average Revenue Per Customer =
DIVIDE([Total Revenue], DISTINCTCOUNT(Customers[Customer_ID]))

Average Order Value

Average Order Value =
DIVIDE([Total Revenue], [Total Orders])

High Value Revenue

High Value Revenue =
CALCULATE(
[Total Revenue],
FILTER(
Customers,
Customers[Category] <> "Regular"
)
)

Revenue Contribution %

Revenue Contribution % =
DIVIDE(
[Total Revenue],
CALCULATE([Total Revenue], ALL(Customers))
)

Dashboard KPIs

Revenue Metrics

- Total Revenue: 30K
- Total Orders: 5
- Average Revenue per Customer: 10K
- Average Order Value: 6K
- High Value Revenue: 26K

Customer Metrics

- Customer Category Distribution
 - Revenue Contribution Analysis
 - Top Revenue Generating Customers
-

Dashboard Visualizations

KPI Cards

Used to display:

- Total Revenue
- Total Orders
- Average Revenue Per Customer
- Average Order Value
- High Value Revenue

Donut Charts

Used to analyze:

- Revenue by Category
- Revenue by Customer

Bar Charts

Used to compare:

- Revenue across Customer Categories

Tables

Used to display:

- Customer-wise Revenue
- Average Order Value
- Revenue Contribution

Slicers

Used for interactive customer filtering.

Key Insights

Revenue Distribution

- Gold customers contribute 50% of total revenue.
- VIP customers contribute 36.67% of total revenue.
- Regular customers contribute 13.33% of total revenue.

Customer Performance

- Ravi generated the highest revenue (15K).

- Krishna generated 11K revenue.
- Rahul generated 4K revenue.

Business Observation

High-value customers (VIP + Gold) contribute approximately 86.67% of overall revenue, indicating the importance of customer retention strategies for premium customer segments.

Skills Demonstrated

Power BI

- Dashboard Development
- Data Visualization
- Interactive Reporting

DAX

- CALCULATE()
- FILTER()
- DIVIDE()
- ALL()
- COUNT()
- SUM()

Data Modeling

- Fact and Dimension Tables
- Relationships
- Star Schema Concepts

Business Analytics

- KPI Design
 - Customer Segmentation
 - Revenue Analysis
 - Performance Tracking
-

Tools Used

- Power BI Desktop
- DAX
- Data Modeling

- Microsoft Excel
-

Project Outcome

Successfully designed and developed a professional Customer Revenue Performance Dashboard that transforms raw sales data into actionable business insights through KPIs, customer analytics, and interactive visualizations.

This project demonstrates end-to-end Business Intelligence workflow skills relevant to Data Analyst and Power BI Developer roles.
